

A man with a beard, wearing a light blue button-down shirt over a blue t-shirt, is looking down at a black smartphone in his hands. He is standing in a greenhouse filled with rows of green plants in black trays. In the background, there are large, white, arched greenhouse structures and a range of mountains under a clear blue sky.

APP^OLOG

DISCOVER THE POWER OF
DIGITAL JOB CARDS

KEY FEATURES

We offer subscription-based software for SMMEs to generate paperless job cards. The system also includes functionality to manage the surrounding infrastructure such as client and product databases, job-specific forms, support tickets and stock management. Most of the features can be opted out of or customized, depending on your custom workflows.

Employees use a mobile app to capture data associated with a job, such as client details, work notes, hours and products used. The app works fully offline, while also syncing across devices whenever an internet connection is available. Checklists for routine tasks, photos of work and client signatures can also be added. The app uses the company's own name, logo and colour theme.

Administrators use a web interface for managing the necessary upstream and downstream processes. Upstream processes include adding and managing a client and product database, configuring forms and checklists and assigning support tickets. Downstream processes include generating reports, updating stock levels and invoice integrating with invoicing software such as Xero, Sage and Quickbooks.

WHY APPOLOG?

We believe that South African companies of all sizes can be empowered through technology. That is why we develop platforms that find the balance between customizability, to preserve individual brand identity and workflows, and similarity of features, to keep subscription costs down. The purpose of our pioneering software suite is to automate a company's internal processes, paperwork and communication through digital job cards. This has proved to add the most value for anyone who manages a team of employees that travel to their clients to render services for which hours and/or products need to be invoiced. However, the surrounding infrastructure such as client databases, stock management, invoice integration, photo capturing and offline access make our software appealing to a much wider userbase as well.

MAIN BENEFITS INCLUDE:

- **Shorter lag time** between completed jobs and generated invoices
- **Fewer mistakes** in billable hours and products used
- Stronger **proof of work** with client signatures
- Reduced workload due to **digitization of paperwork**
- Convenient **offline access** to latest and data
- Seamless **onboarding and handovers**

CONTENTS

1 Upload products and clients	04
2 Configure forms and checklists	05
3 Access client data offline	06
4 Start jobs and make notes	07
5 Add products and photos	08
6 Submit jobs and generate reports	09
7 Manage stock and set alerts	10
8 Integrate with invoicing software	11
9 Process support tickets	12
10 Customize themes and settings	13

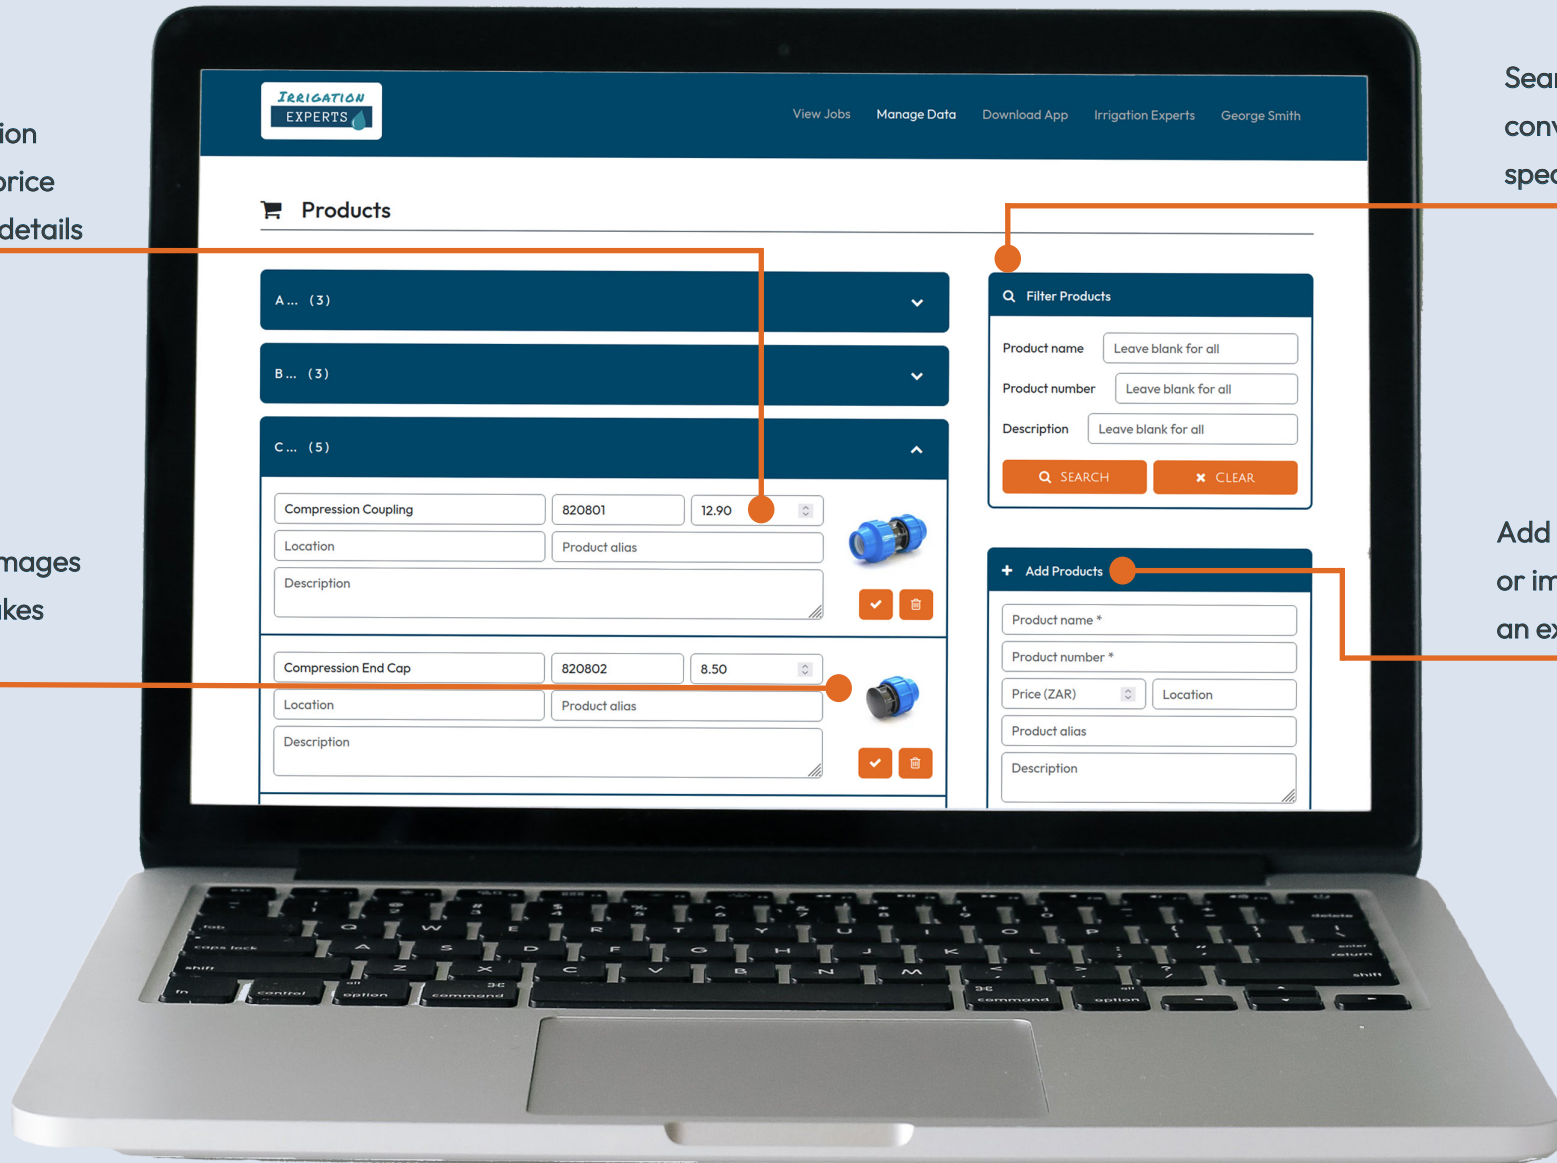

1 UPLOAD PRODUCTS AND CLIENTS

Specify information
such as product price
or client contact details

Upload product images
to minimize mistakes
during jobs

Search database for
convenient access to
specific records

Add records manually
or import in bulk from
an existing database

2 CONFIGURE FORMS AND CHECKLISTS

Manage multiple forms for all types of jobs

Map custom text boxes or multiple-choice questions to your forms

Set up and group checklists for routine tasks

Specify whether fields are compulsory and edit their appearance

The screenshot shows the 'IRRIGATION EXPERTS' web application interface. The top navigation bar includes links for 'View Jobs', 'Manage Data', 'Download App', 'Irrigation Experts', and 'George Smith'. A sidebar on the left contains a 'Forms' icon and a list of forms: 'Call Out', 'Installation', 'Yearly Service', and 'New form *'. The main content area displays the configuration for the 'Call Out' form. It lists five fields with their respective types and compulsory status, and a 'Forms' section for each field. The 'Call Out' form is selected, and its 'Forms' section shows 'Call Out' checked, 'Installation' unchecked, and 'Yearly Service' unchecked. The 'Call Out' form is also selected in the sidebar.

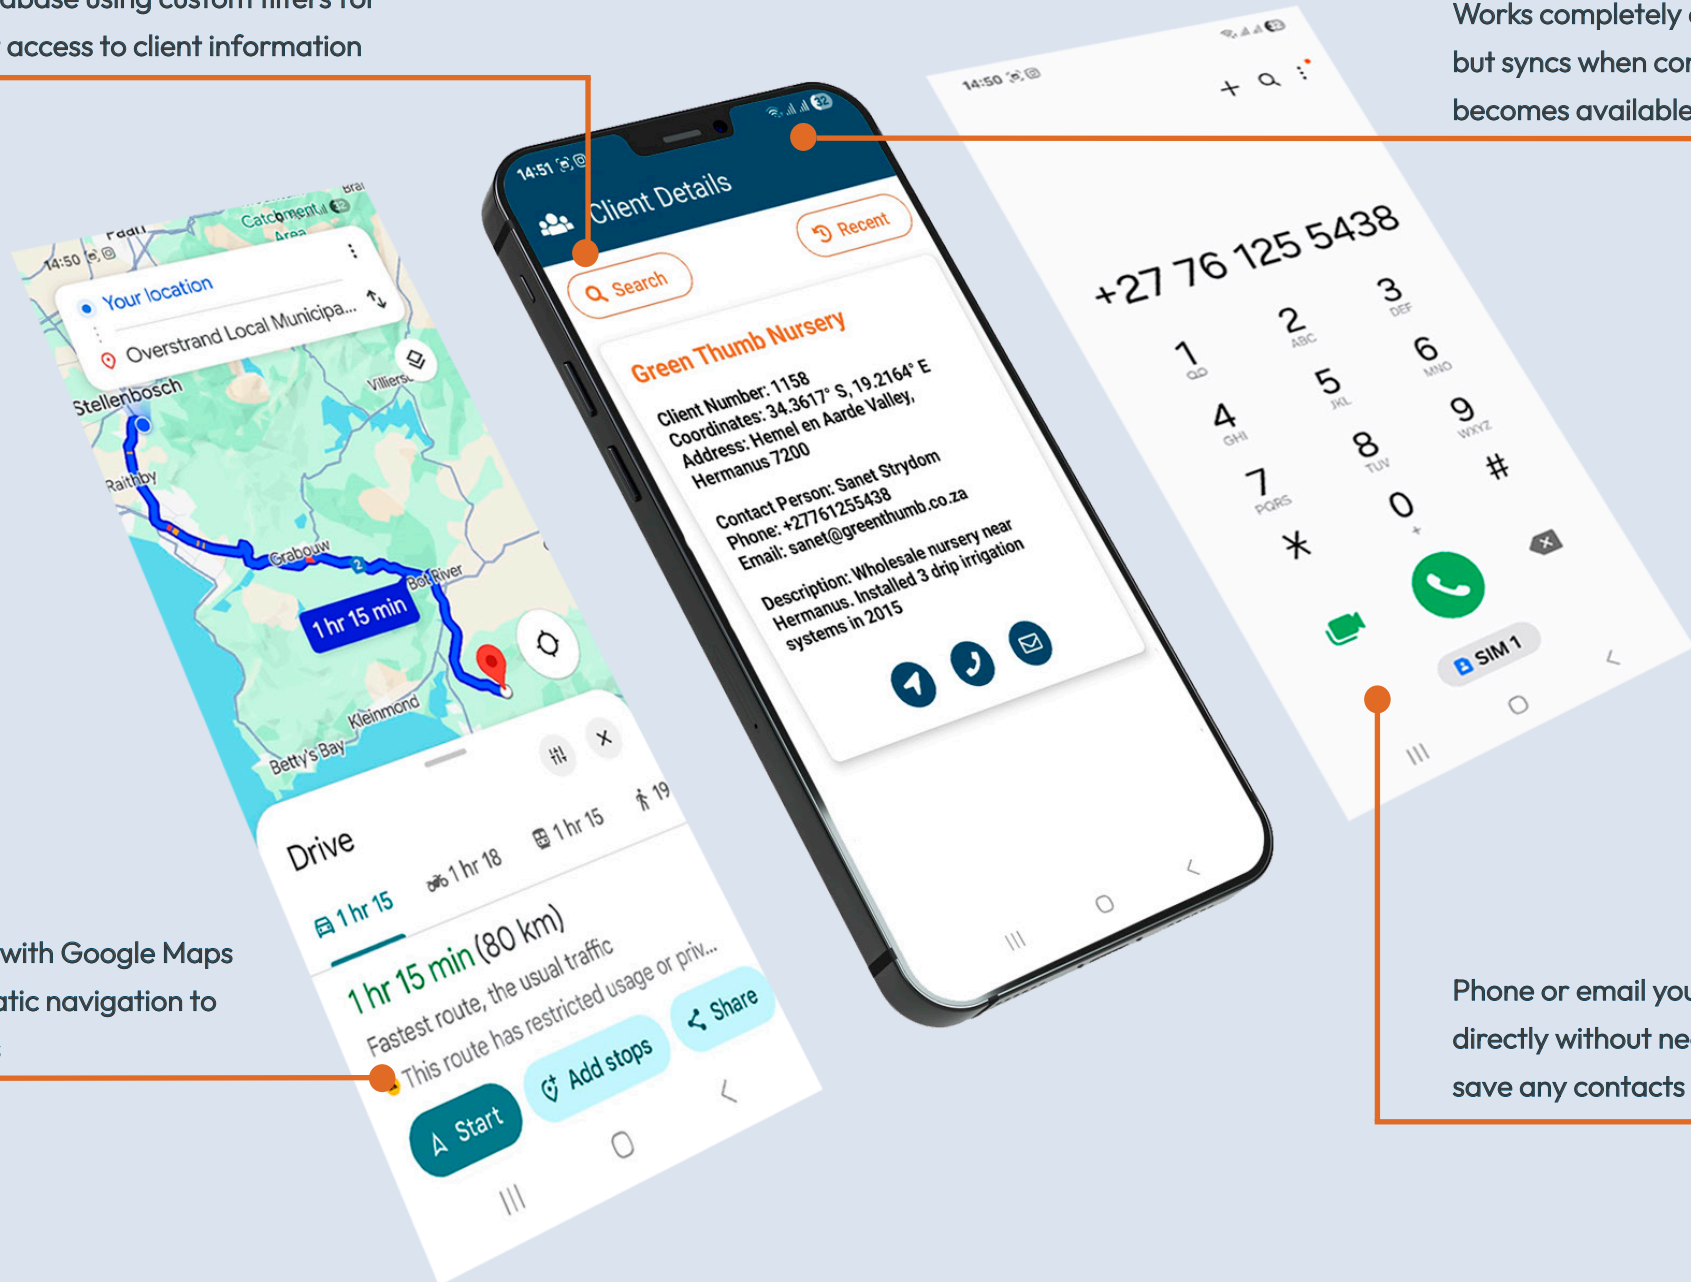

3 ACCESS CLIENT DATA OFFLINE

Search database using custom filters for convenient access to client information

Works completely offline but syncs when connection becomes available

Integrates with Google Maps for automatic navigation to new clients

Phone or email your clients directly without needing to save any contacts

4 START JOBS AND MAKE NOTES

Nearby clients are automatically detected for new jobs, otherwise choose from client list

Pause and resume jobs to accurately capture billable hours

Mark checklists for routine tasks, with time stamps for each item

Make notes using text boxes, multiple-choice fields and drop-down lists that immediately sync

Access historic data from all past jobs for easy future reference

5 ADD PRODUCTS AND PHOTOS

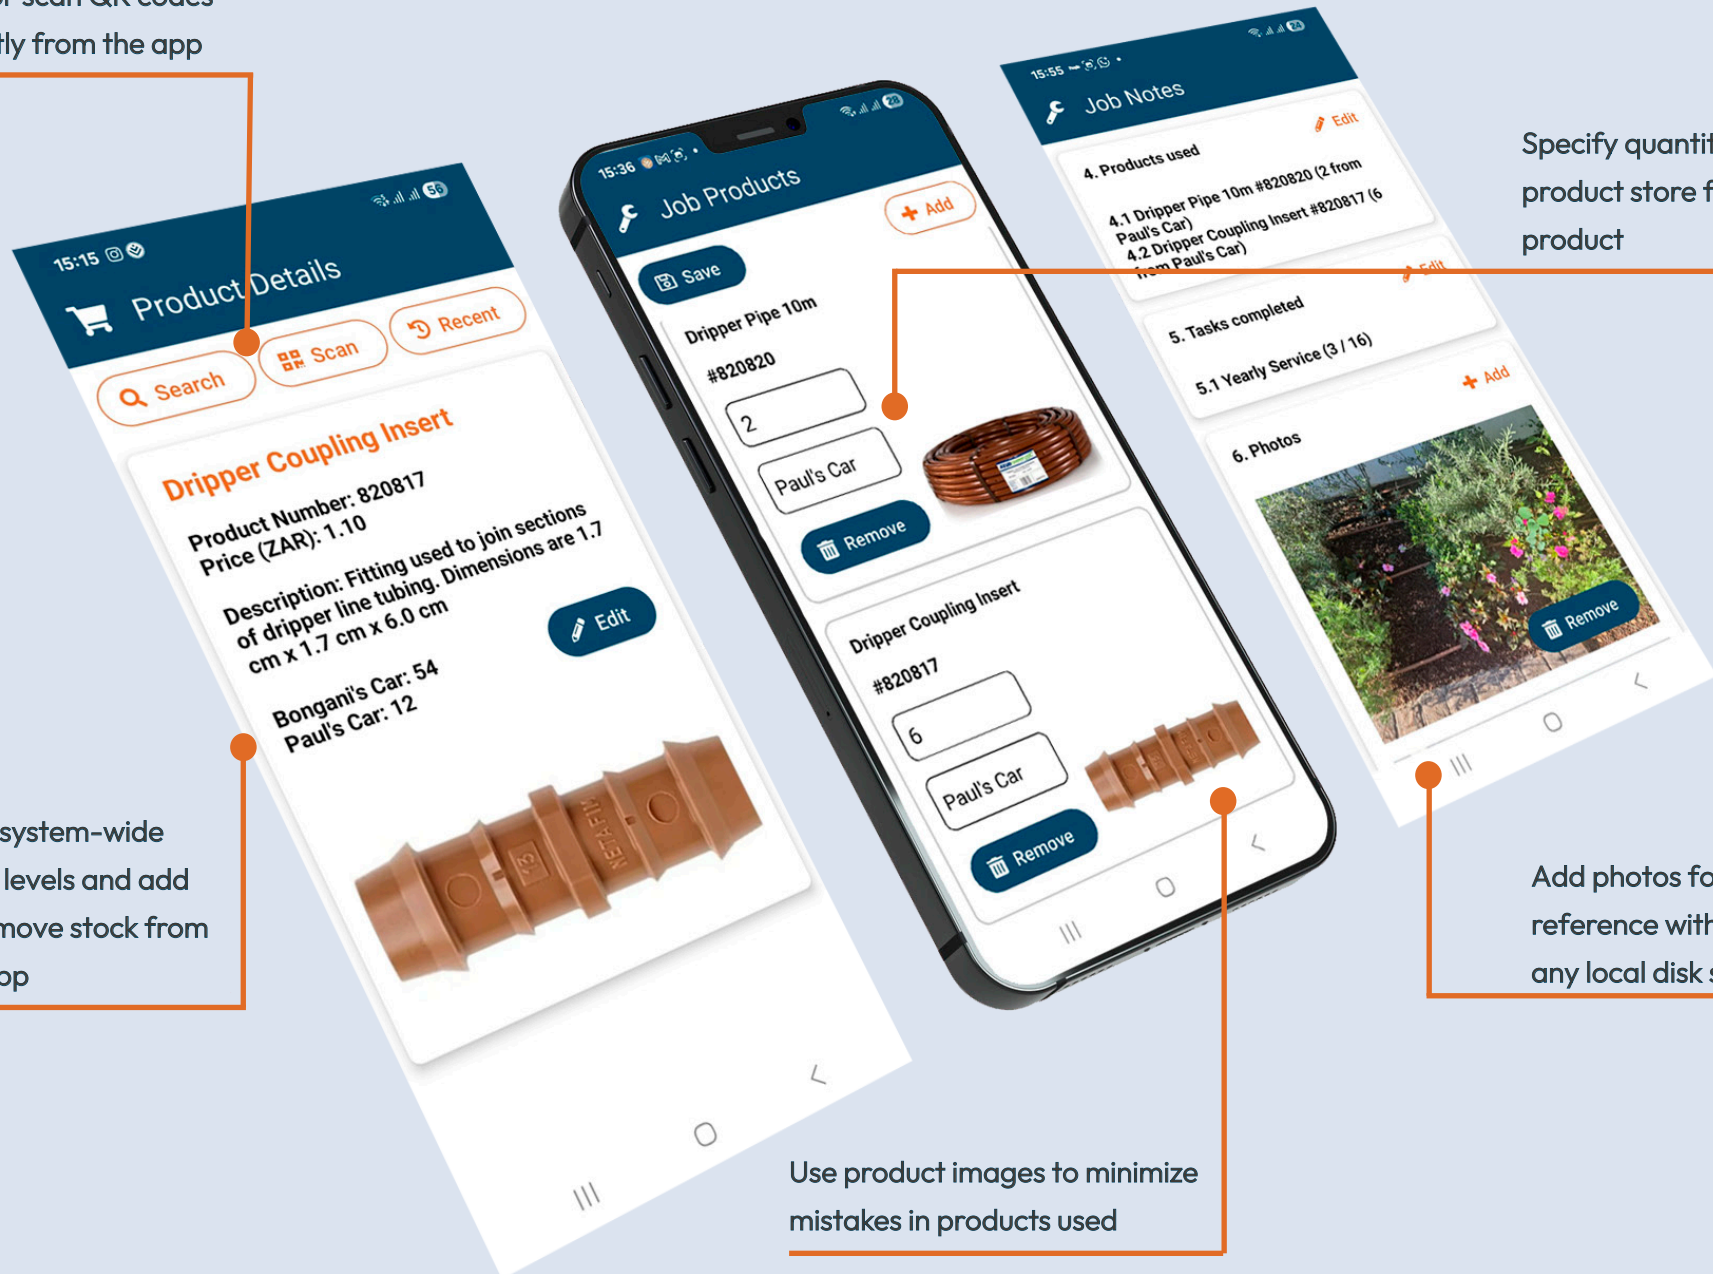

Search for products to add or scan QR codes directly from the app

View system-wide stock levels and add or remove stock from the app

Specify quantity and product store for each product

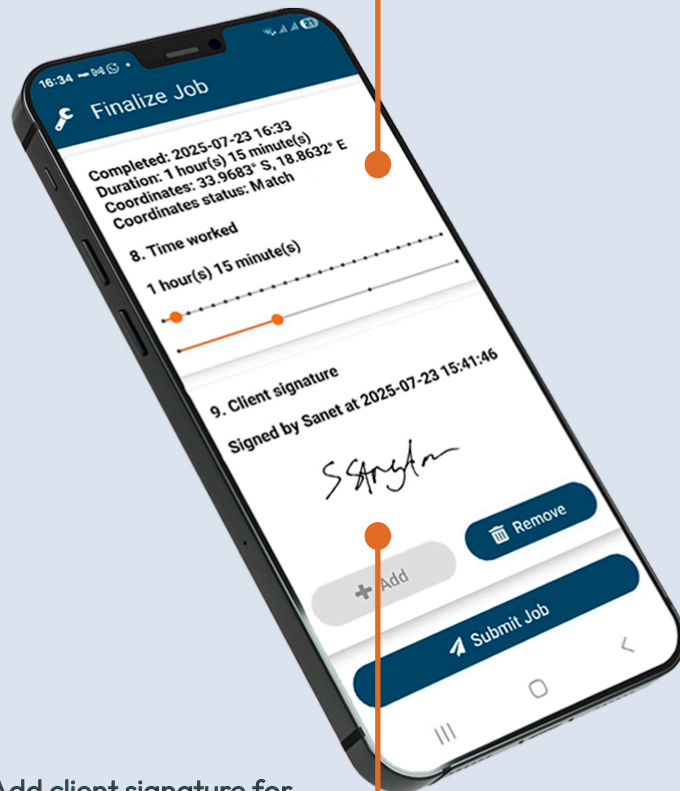

Add photos for future reference without using any local disk space

Use product images to minimize mistakes in products used

6 SUBMIT JOBS AND GENERATE REPORTS

Correct billable hours
if different from total
duration on site

Add client signature for
stronger proof of work

Instantly generate PDF
report and email to selected
stakeholders
